

Advantages and Functions

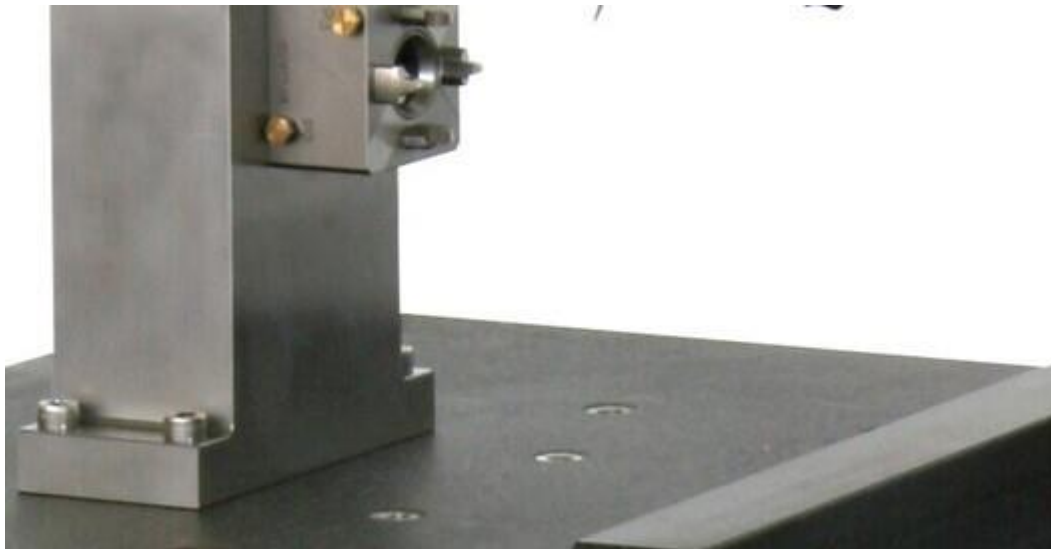

Easy to use

EROWA presetting systems are designed to be intuitive and easy to use without extensive training. Clearly guided measurement sequences and easy-to-read displays support users in their daily setup processes. This ensures reliable, precise results even with frequently changing workpieces.

Flexible use

Presetting systems can be used flexibly for different workpieces, electrodes, and applications. They are suitable for both individual parts and series production and can be integrated into manual or semi-automated manufacturing concepts. This allows them to adapt optimally to changing production requirements.

Save time

Pre-setting outside the machine significantly reduces non-productive times. While workpieces or electrodes are being prepared and checked, the machine tool remains productive. This increases machine utilization and noticeably shortens throughput times.
